- Add a show controller, show service and show.html to your project. Add a new route to your api/routes.js that will get show details by id.

- When the user clicks the details button - they are taken to a new page for the TV Show selected. Create a new route that include the show id. Use the resolve option inside the routeProvider to get the show details by id from the service.

- This new page should display the full details of the TV show including - name, image, description, genres, cast (including image, character name and actor name). All details should be cleanly formatted - meaning no brackets or html tags ([] or {}).

  - An image must display for the cast member. If no image is present for the character or the person - then replace that image with a default image. Make sure you look at the data structure to determine that there is no image for the character or person.

  - The default image must be located inside your project. Create an images folder and place the default image inside that folder.
